

G2C INGÉNIERIE & CONSEIL

ENGINEERING · CONSULTING · CLIENT-SIDE PM · DESIGN & SUPERVISION · CONSTRUCTION

Design, manage and build projects that create value.

From concept to handover, G2C supports public and private project owners, investors and companies in the design, engineering, management and supervision of their construction projects in Gabon.

OVERVIEW

An engineering and consulting partner, from concept to delivered works

G2C INGÉNIERIE & CONSEIL is a simplified joint-stock company under Gabonese law, specialised in civil engineering studies, consulting and client-side project management, design & site supervision and construction. We step in at the earliest stage of the project — where value, feasibility and risk control are decided — and support public and private project owners, investors and companies through to handover: houses, buildings, bridges, car parks and other works.

Building site monitoring in Central Africa — sector illustration.

OUR APPROACH

01

Understand

Listen to the need, frame ambitions, constraints and stakes.

02

Structure

Translate intent into coherent, realistic technical solutions.

03

Secure

Anticipate technical, regulatory, financial and schedule risks.

04

Deliver

Coordinate stakeholders and guarantee compliant execution.

THE PROJECT VALUE CHAIN

48 h

Reply time to a study request

4 divisions

Engineering, PM, Design, Construction

14

Fields of expertise covered

100 %

Deliverables checked in-house

01 Engineering & Studies

Analyse. Design. Optimise.

- Technical and engineering studies
- Design and feasibility studies
- Civil engineering studies
- Technical optimisation of projects

02 Client-Side Project Management

Decide. Secure. Steer.

- Advice to the project owner
- Project framing and definition
- Coordination of stakeholders
- Cost, schedule and objective tracking

03 Design & Site Supervision

Design. Coordinate. Control.

- Project design and preparation
- Technical coordination
- Works supervision
- Compliance control and handover

04 Construction & Project Control

Build. Coordinate. Deliver.

- Execution of works
- Operations management
- Quality, cost and schedule control
- Site logistics and safety
